

WALLTITE®

BENEFIT SUMMARY

WALLTITE is a one step process that provides a gap free, air tight, monolithic envelope of low permeability closed cell moisture resistant insulation, that adheres tenaciously to virtually all surfaces, smooth or irregular.

- Effective insulation material listed by **CCMC # 12840-R**
- Effective air barrier listed by **CCMC # 12877-R**
- Effective air barrier system listed by **CCMC # 12932-R**

Comfort

High insulation value combined with air barrier system continuity enables Heating, Ventilating and Air-Conditioning (HVAC) systems to perform to specifications and keeps occupants more comfortable.

Air tightness

WALLTITE is gap-free, airtight, monolithic envelope of low-permeability that adheres tenaciously to virtually all surfaces, smooth or irregular. Eliminates convective airflow both through and around insulation and minimizes thermal bridging.

Durability

Added protection against premature building deterioration.

Structural strength

Increased rack and shear resistance when sprayed onto gypsum board and vinyl siding and increased racking strength when sprayed on Oriented Strand Board (OSB).

Quality assurance

Test performed during job ensure high quality installation, simplified design and supervision, efficient use of time and material and faster project completion.

Versatility

Numerous applications in institutional, commercial, industrial and residential use.

Indoor air quality

WALLTITE significantly improves the durability and climate control of a building. Effectively controls moisture transfer and condensation.

Eco-efficiency

According to eco-efficiency analysis, WALLTITE insulation/air barrier system has been proven to be more eco-efficient than conventional insulation/air barrier systems.

Lower costs

WALLTITE can be applied over an exceptionally large area in a single workday with unsurpassed sealing performance. It's **five times** faster to apply than membrane and board stock, which facilitates on-site scheduling and results in exceptional cost efficiency.

Raising Performance To New Heights®

Innovative products are the source of BASF's success. New knowledge is acquired through collaborations with universities and research institutes, as well as joint ventures with high-tech companies and BASF.

Choosing WALLTITE is opting for a product backed by the resources and know-how of an international leader in the chemical sector. It's choosing a company that employs in Research and Development 7,000 people and spends \$ 1.1 billion annually.
